

ABSTRACT**Manufacture of data storage devices**

A device and method for preparing media discs (2) in which servowriting and
5 verification of the media may be carried out simultaneously. A common
monolithic platform (1) is provided which supports air bearing systems which
allow movement of a media disc rotary carrier (5), a servowriting headstack (3)
and certifier headstack (4). Indirect drive may be provided to the rotary carrier
(5) via coupling means (62).
